## Professional Summary

---

- Having 2+ years of professional experience in QA in the areas of Manual, Functional, Regression, Smoke, Sanity, across web, mobile, and IoT platforms.
- Having good knowledge in AI Chatbot/Conversational, E-commerce, EdTech, CRM, IoT, and Real-time Tracking domains.
- Worked on testing AI chat agent integrations for order tracking, support ticket creation, and chat-based order placement, validating intent recognition and conversation flow across web, mobile, and WhatsApp.
- Performed multi-language (English and Tamil) testing to ensure localized user experience and reliable response handling.
- Good exposure to end-to-end E-commerce testing including order placement, order management, tracking, PC Builder, Product Comparison, Seller Dashboard, and Delivery Boy mobile application.
- Validated payment and marketplace integrations across eBay, Google Shopping, Meta Shopping, Stripe, and Razorpay to ensure accurate synchronization and secure transactions.
- Proficient in Playwright automation testing with GitHub Copilot AI-assisted scripting to support regression coverage.
- Proficient in software testing life cycle - Requirement Analysis, Test Estimation, Test Planning, Test Case design and review, Test Execution, and Defect Management.
- Good exposure to both Agile (Scrum) and SDLC/STLC methodologies.
- Taking care of all QA deliverables like test plan, test case documentation, defect reports, and other regular testing artifacts.
- Experience coordinating client-facing projects across multiple time zones, including requirement gathering, wireframe preparation, and workflow documentation.
- Mentored team members on QA best practices, test automation workflows, and defect management to drive overall quality improvement.
- Extensive experience in mobile application testing across Android and iOS platforms, focusing on usability, responsiveness, and seamless cross-device compatibility.
- Excellent analytical skills, client coordination skills, and effective time management skills.

## Skills Profile

| Other Tools          | Postman, Chrome DevTools, LambdaTest, VS Code                                      |
| Platforms            | Web, Mobile (Android & iOS), WhatsApp                                              |

## Work Experience

---

### QA Engineer & Project Coordinator | ICore Software Technologies

Coimbatore, India

- Executed manual, functional, regression, smoke, and sanity testing across web, mobile (Android & iOS), and WhatsApp platforms for multiple concurrent client projects.
- Performed cross-browser/device testing using Chrome DevTools and LambdaTest.
- Built and maintained Playwright automation scripts with GitHub Copilot-assisted scripting to support regression coverage.
- Logged, tracked, and triaged defects through the full defect life cycle using JIRA, with test case and documentation management in Confluence.
- Designed test plans and test cases following Agile (Scrum), SDLC, and STLC methodologies.
- Coordinated 3 Australia-based client projects with a 4-member team, managing testing activities and collaborating with UI and development teams.
- Led client discussions, daily standup meetings, requirement gathering, wireframe preparation, and workflow documentation across multiple time zones.
- Managed project tracking and technical configurations including JIRA, Confluence, Firebase authentication, SMTP setup, Shipping APIs, Apple Developer Accounts, eBay/Meta Business integrations, and transactional email templates.

---

### Fulfillment Team Lead | Aaryan Online Retail

Tirupur, Tamil Nadu

- Managed a two-person team handling order fulfillment and coordination with logistics.
- Oversaw order accuracy, timely dispatch, and customer satisfaction metrics.
- Collaborated with software teams to report and resolve operational issues.

## Projects Summary

---

### AI Chatbot

#### Project Description:

This project involves an AI-powered chat agent integrated with e-commerce platforms to support order tracking, support ticket creation, and chat-based order placement. The chatbot operates across web, mobile, and WhatsApp, in both test and live environments, supporting English and Tamil to deliver a localized user experience.

#### Responsibilities:

- Tested AI chat agent integrations with e-commerce platforms for order tracking, support ticket creation, and chat-based order placement workflows.
- Validated chatbot response accuracy, intent recognition, and conversation flow across web, mobile, and WhatsApp platforms in test and live environments.
- Conducted multi-language testing in English and Tamil to ensure reliable, localized response handling.
- Delivered live AI Chat Agent product demonstrations with WhatsApp and chat integrations at Global Expo 2026, Coimbatore.

---

### E-commerce & Retail Platform

#### Project Description:

This project covers a multi-feature e-commerce and retail platform supporting order placement, order management, shipping, and seller operations, including advanced capabilities such as PC Builder, Product Comparison, location-based listings, and integrations with major marketplaces and payment gateways.

#### Responsibilities:

- Performed end-to-end testing of e-commerce modules including order placement, order management, tracking, page configuration, and shipping charge workflows.
- Validated advanced platform features such as PC Builder, Product Comparison, location-based product listing, Delivery Boy mobile application, and Seller Dashboard functionalities.
- Tested AI-enhanced product integrations and payment workflows across eBay, Google Shopping, Meta Shopping, website platforms, Stripe, and Razorpay to ensure accurate synchronization and secure transactions.

---

## Learning Management System (LMS)

### Project Description:

This is a web and mobile LMS platform supporting student-teacher interactions along with administrative management workflows, covering lesson booking, subscriptions, assignments, quizzes, and grading across multiple user roles and devices.

### Responsibilities:

- Performed end-to-end testing of a web and mobile LMS platform supporting student-teacher interactions with administrative management workflows.
- Validated key modules including teacher availability, lesson booking, one-to-one sessions, subscriptions, assignments, quizzes, and grading functionalities.
- Conducted functional, UI, responsive, and workflow testing across multiple user roles and devices.
- Participated in pre-development discussions and client requirement clarifications across different time zones.

---

## CRM – Perfex

### Project Description:

This project involves the Perfex CRM platform, covering billing, production, stock maintenance, task management, sales reporting, lead management, and customer tracking modules, with client-specific customizations and enhancements.

### Responsibilities:

- Tested modules including Billing, Production, Stock Maintenance, Task Management, Sales Reports, Lead Management, and Customer Tracking.
- Conducted functional and customization testing for client-specific workflows and module enhancements.

---

## Smart Door System

### Project Description:

This is an IoT-based smart door system supporting remote monitoring and control through mobile and admin panels, with features for access control, activity logging, and emergency alerts.

### Responsibilities:

- Tested an IoT-based smart door system with remote monitoring and control through mobile and admin panels.
- Validated door operations, user access control, activity logs, emergency alarms, and synchronization between admin and user interfaces.

---

## Real-Time Vehicle & Personnel Tracking Application

### Project Description:

This is a real-time tracking and team management mobile application supporting live location updates, communication, and subscription-based access for field teams and personnel.

### Responsibilities:

- Tested a real-time tracking and team management mobile application with live location and communication features.

- Validated location updates, time tracking, location assignment, chat functionality, subscription flows, and cross-device compatibility on Android and iOS.

---

## **Podcast & Music Streaming Web Application**

### **Project Description:**

This is a web-based podcast and music streaming platform supporting program creation, presenter management, advertisement workflows, and media playback, with third-party streaming integrations including Alexa and iTunes.

### **Responsibilities:**

- Performed functional testing and content management for a web-based podcast and music streaming platform.
- Validated program creation workflows, presenter management, advertisement functionality, and media playback features.
- Tested third-party streaming integrations including Alexa and iTunes, ensuring proper playback, platform compatibility, and stable web application performance.

## ***Education***

---

- Completed B.Tech in Chemical Engineering at KPR Institute of Engineering and Technology, Coimbatore, 2018 – 2022.

## ***Languages Known***

---

Tamil, English
